

# Low Location Lighting (LLL) Testing

Are you due for your compulsory five yearly Low Location Lighting test?  
If so, Seaward Safety can help

Legislation states that a Low Location Lighting (LLL) system must be fully tested at least once every five years, according to ISO 15370:2010 and IMO Resolution 752(18). It is recommended that a test and inspection of at least one deck in each main vertical zone be conducted annually.

As part of our Testing Service, our fully trained technicians will ensure that the luminescence of your LLL system meets the legally required standard. Seaward Safety's technicians will take readings on site and will consult on further steps should your luminance levels not comply with the legal requirement.

## Seaward Safety, Supplying Signage Solutions

In addition to Seaward Safety's Testing Service, once on board our technicians can offer a survey of your safety signage and escape route systems to ensure full IMO compliance.
