

Designed to withstand the typical harsh environments of the offshore industry, our frames are manufactured using the most premium quality materials available. A highly durable GRP resin is used to construct the frame, which is both fire and UV resistant. The UV and impact resistant clear polycarbonate window is sealed by a rubber gasket, ensuring each frame is watertight with it's contents protected from the elements. Stainless steel fixtures and fittings ensure the contents of the frame can be changed with ease and without the risk any of rust or corrosion.

Suitable for both internal and external locations, our frames can be installed by:

- Handrail mounting
- Mounting to existing frames
- Mounting to uni-strut
- Mounting to a bulkhead / wind-wall

The benefits of our Safety Plan Frames:

- Watertight frame
- Highly durable materials
- UV and impact resistant
- A light weight alternative to steel frames

Manufactured in green as standard, our Safety Plan Frames are available in alternative colours on request.
